

FORTUVA

**A Next-Gen Prediction
Ecosystem on Solana**

<https://hashex.org/audits/fortuva-sol-prediction/>

EXECUTIVE SUMMARY

➤ Fortuva is a Web3 organization building a suite of decentralized, user-driven prediction and gaming experiences. Its flagship product, Fortuva Prediction, is a fast, transparent prediction game powered by the Solana blockchain.

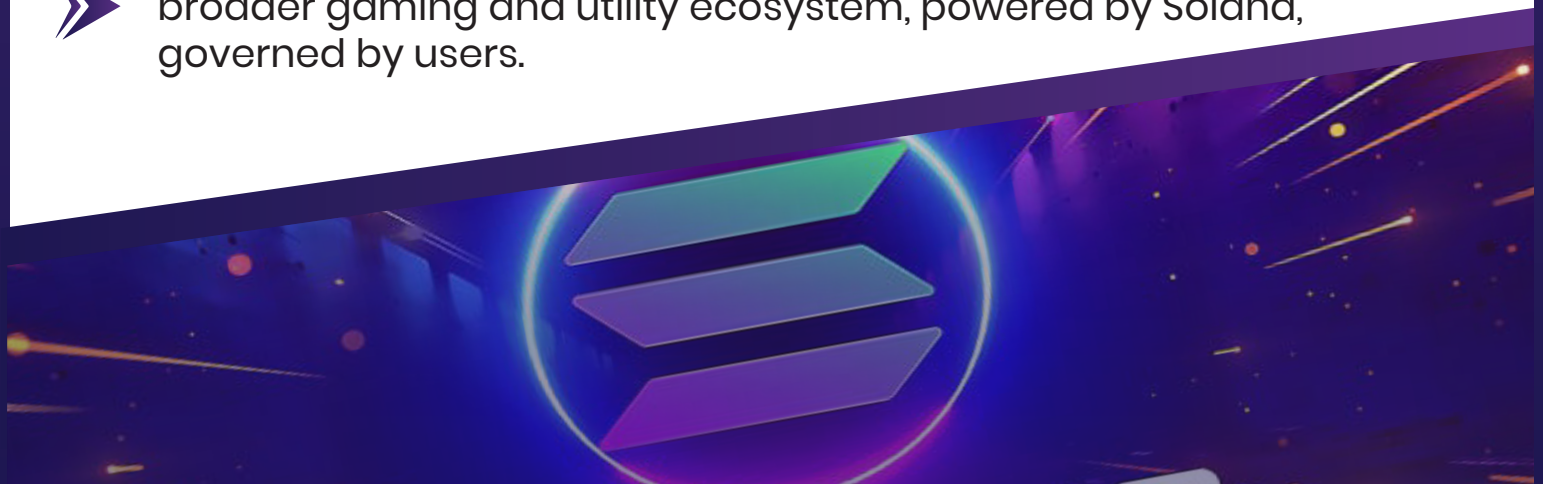

➤ Designed for speed, scalability, and simplicity, Fortuva Prediction brings the excitement of short-term forecasting to a global, on-chain audience. Built on Solana's high-throughput infrastructure, it enables real-time participation with near-zero transaction fees.

➤ Unlike legacy systems, Fortuva Prediction doesn't limit round size. Anyone can join, bet SOL, and win. Players predict price movements in short intervals to multiply their SOL for correct predictions and earn rewards each round. All gameplay is governed by smart contracts, audited by HashEx, and price feeds sourced from a trusted on-chain oracle(Pyth).

➤ Supporting this system is the Fortuva Token (FN), a native utility token used for rewards, staking, and future ecosystem features. Players earn FN through participation, and higher-value bets unlock bonus distributions (in addition to SOL earnings for correct predictions).

➤ FN is stored off-chain on devnet and distributed manually, while mainnet players can claim directly on-chain.

➤ Fortuva's long-term vision is to expand beyond prediction into a broader gaming and utility ecosystem, powered by Solana, governed by users.

THE RISE OF PREDICTION MARKETS

➤ Prediction markets have long captured the imagination of traders and data enthusiasts alike. With the rise of decentralized finance, they've evolved into powerful tools for crowd-sourced forecasting, speculation, and entertainment.

➤ Fortuva Prediction follows a proven model: users forecast whether an asset's price (e.g., SOL/USD) will rise or fall during a timed window. Players can select an "UP" or "DOWN" position before the round begins. At the end of the live phase, the smart contract compares the locked price with the end price to determine winners.

➤ Outcomes are powered by Pyth, ensuring tamper-proof results and provable fairness.

➤ By blending real-time market data with gamified design, Fortuva Prediction transforms price action into an interactive, blockchain-native experience, where accuracy, not chance, drives reward.

THE FORTUVA PREDICTION PLATFORM

➤ Fortuva Prediction is a decentralized, on-chain game that lets users forecast short-term price movement of digital assets like SOL/USD. Players choose “UP” or “DOWN” before the round begins, predicting whether the asset’s price will rise or fall by the end of the interval.

➤ Each round is fully autonomous and powered by a smart contract. A locked price is recorded at the start of the “LIVE” phase using Pyth. When the round ends, the contract compares the end price to the locked price to determine winners.

➤ There’s no cap on participants — anyone can join any round. More users create more volume, more data, and more opportunities to win.

➤ Built on Solana, the platform delivers instant execution, minimal fees, and a seamless user experience. Fortuva Prediction is fast, fair, and scalable, setting the foundation for a new generation of Web3 games.

FORTUVA TOKEN (FN) UTILITY

➤ The FN token powers all activity across the Fortuva ecosystem. Within Fortuva Prediction, it serves as an additional reward mechanism, staking asset, and future utility token.

➤ Players earn FN based on the size of their bet:

Bet 0.01 SOL and earn 0.1 FN

Bet 0.1 SOL and earn 1 FN

Bet 1.0 SOL and earn 10 FN

Additionally, users will earn bonus FN tokens each round, according to their betting amount:

Bet ≥ 1 SOL and earn +2 bonus FN

Bet ≥ 0.7 SOL and earn +1 bonus FN

Bet ≥ 0.3 SOL and earn +0.5 bonus FN

➤ On devnet, FN balances are recorded off-chain in a secure database and will be distributed manually after token launch. On mainnet, users will be able to claim FN directly through the app.

➤ FN will also fuel upcoming features: avatar purchases, leaderboard boosts, staking pools, and cross-game rewards. As new projects are launched under Fortuva, FN will act as a shared layer of utility across the ecosystem.

TOKENOMICS

➤ The FN token has a fixed total supply of 21,000,000 tokens. Distribution is designed to balance development, early incentives, and long-term ecosystem health.

- ✓ Airdrop + Bonus Reward: 10%
- ✓ Team & Advisors: 24.5%
- ✓ Investors: 16.2%
- ✓ Community Treasury: 25%
- ✓ Ecosystem & Rewards: 24.3%

➤ Early FN distribution on devnet is used to reward teasers and build momentum ahead of mainnet deployment. These tokens will be released once FN is live on-chain.

➤ As the Fortuva ecosystem grows, token utility will extend beyond Fortuva Prediction into future platforms and governance models.

OUR ROADMAP

Q3 2025

- ✓ Launch of Fortuna Prediction
- ✓ FN Token Launch
- ✓ Community Airdrop

Q4 2025

- ✓ FN Token Liquidity Pool Establishment & Presale Campaign Launch
- ✓ Leaderboard Avatar Marketplace
- ✓ Implement Multi-Mode Betting System (Fast: 1min, Strategic: 5min)

2026+

- ✓ Event-Based Betting Mode
- ✓ Multi-chain expansion
- ✓ New Fortuna games & Web3 utilities

COMMUNITY & INCENTIVES

- Fortuva's growth is fueled by its community, and rewarded accordingly
- Players on devnet earn 0.1 FN per round (as long as they bet at least 0.01 SOL), with up to 10 FN for any round where a user bets over 1 SOL. These rewards are tracked off-chain and distributed after launch. On mainnet, FN can be claimed directly by users through the platform based on the size of their bet.
- In Q4 2025, Fortuva will launch a series of cosmetic avatars tied to leaderboard visibility and bonus mechanics. Top-ranking players may earn exclusive items and future multipliers.
- The Community Treasury (25% of FN supply) supports long-term incentives: seasonal events, grants, tournaments, and collaborative initiatives. This ensures Fortuva grows with its users, not part from them.

TECHNOLOGY STACK & SOLANA ADVANTAGE

- Fortuva Prediction is built on Solana for one core reason: performance
- Solana's high throughput and near-instant finality enable real-time gameplay at scale, with ultra-low transaction costs. This makes it ideal for prediction markets where speed, fairness, and accessibility are critical.
- Smart contracts govern every round, from locking in prices to settling outcomes and distributing rewards. Price data is pulled from Pyth, ensuring accuracy and eliminating manipulation. Our contracts are audited by HashEx for added security and transparency.
- The platform's architecture is modular and future-ready, enabling Fortuva to expand across chains or add new game types without breaking the core experience.
- Solana gives Fortuva the infrastructure to grow — fast, fair, and without compromise.

CLOSING & CALL FOR COLLABORATION

- Fortuva Prediction is not just a game. It's the foundation of a growing Web3 organization focused on prediction, gaming, and decentralized participation.
- Fortuva Prediction marks the first of many interactive platforms powered by FN and built on Solana. With each launch, we move closer to a future where utility, ownership, and entertainment converge on-chain.
- We invite developers, community leaders, creators, and early users to help shape this future by playing, building, and collaborating with us.
- Whether you're placing a bet, designing a tool, or growing the ecosystem, Fortuva is open, extensible, and community-first.

LET'S PREDICT THE FUTURE, TOGETHER.
